EDUCATION

George Mason University **Dec 2026**

Bachelor of Science in Computer Science

- **Relevant Coursework:** Algorithms, Natural Language Processing, Computer Communications and Networking, Operating Systems, Databases, Secure Programming and Systems, Mobile App Development, OOP
- **Overall GPA**: 3.98/4.0, Dean's List

SKILLS

- **Languages:** Java, Python, C/C++, JavaScript, TypeScript, HTML/CSS, Kotlin, SQL
- **Frameworks/Technologies:** React Native, Node.js, Express.js, PyTorch, REST API, MySQL, MongoDB, Tailwind, Microsoft Power Apps, Microsoft Power BI, Dataverse
- **Developer Tools:** Git/GitLab, Visual Studio Code, Jupyter Notebook, Linux, PowerShell, Advanced Excel, Jira

CERTIFICATIONS

- AWS Cloud Practitioner **July 2025 - July 2028**
- CompTIA Security+ **July 2026 - July 2029**
- AWS Certified Solutions Architect Associate (In Progress)

WORK EXPERIENCE

Software Engineer Intern | *Ashburn, VA* **May 2026 - Present**

CACI

- Developed an AI-powered chatbot to help users navigate complex technical documentation by providing clear guidance, answering questions, and quickly directing them to the information and resources they need.
- Engineered a Power Apps and Dataverse-based estimation platform to replace a legacy Excel workforce planning tool, automating cost calculations, supporting role-based workflows, and enabling multi-user collaboration
- Created Power BI dashboards for real-time estimate tracking, forecasting visibility, and project status reporting across multiple teams.
- Participated in an Agile development environment through daily progress updates, technical discussions, iterative development, testing and problem-solving live go-to-market use cases.

AI Agent Builder Intern | *Remote* **Aug 2025 - Sep 2025**

NeuralSeek

- Built and deployed a fully functional AI agent stimulating complex enterprise workflows, implementing dynamic decision logic, multi-tier architecture, and API integrations to emulate real-world backend systems.
- Developed logic flows, API integrations, and decision frameworks for autonomous agent behavior in a business context.
- Contributed to weekly team discussions to communicate progress, identify challenges, and develop practical solutions for business use cases.

PROJECTS

SQLgui | React/React Flow, Flask, Docker, HTML/CSS, JavaScript

- Designed the system architecture and UX for a client-heavy React + Flask application, optimizing responsiveness and eliminating backend data storage for increased privacy and low-latency performance.
- Integrated the React frontend with a Flask REST API using structured JSON payloads and developed UI components for generating, displaying, and copying SQL code.

Mini Spotify Wrapped | Spring Boot, React, Java, Spotify Web API

- Built a Spring Boot backend that authenticates users through Spotify OAuth2 and fetches personalized data including top tracks and artists.
- Used Spring WebClient to securely retrieve and expose user data via REST endpoints and configured Gradle build system and Spring Boot security filters for robust and maintainable backend logic.
